

EARTH 04

Gayther Colour & Learn

(demonym: terran | uhth | 3:0)

The Earth is the third planet from the Sun. It is the only place in the known universe that is habitable and where life has originated. The word for Earth formed from the old English term, Eorde, meaning ground or soil. It is also referred to as Terra, after the Roman Goddess Terra or the Greek Goddess Gaia, who is the personification of Mother Earth. Within astrology, it is associated with the three earth star signs, Taurus, Virgo and Capricorn and is often considered the planet of fertility, creativity and longevity. The planet is seen as having a feminine or female identities. **Though there is no direct LGBTQIA+ connection, it is associated with feminine gender identities.** Ultimately the Earth is about life and fertility
