

# NOBELIUM 07

GAYTHER COLOUR AND LEARN

Niobium is a chemical element with the symbol Nb and has the atomic number 41. The term originates from Greek mythology, Niobe, the daughter of Tantalus, after which the metal tantalum was named and shares similarities to Niobium. It was determined in 1846 that tantalum ores contained a second element, which became Niobium. Niobium is typically used in high-strength, low-alloy steel alloys and jet and rocket engines.

## NON-BINARY

A person who identifies as non-binary cannot identify or connect with traditional or conventional male or female genders, considered beyond genders.
