

Oxygen is a chemical element with the symbol O and has the atomic number 8. The term originates from the Greek terms οξυ and γονίδια, which means acid-forming. Oxygen is a highly reactive non-metal and most abundant element in the Earth's crust. Typically used in the respiration process of all animals, in which they breathe in oxygen and expel carbon dioxide, as well as help fuels burn, water treatment, and chemical combustion, which are just some of its uses.

## OMNISEXUAL

A person who will likely feel attraction to all gender identities and sexualities. For example, an omnisexual male might be attracted to men, women, transgender and transexual women and men, as well as any person, regardless of how they identify within the gender scale
